Cole is an urban planner. He wants to create a small scale drawing of a city block. The block is a square with an area of 8,100 square meters. Create a scale drawing of the block using a scale factor of 0.1. So the first thing we could think about, they give us the area of the block. And it's a square block. So it has the

SCALE DRAWING PROJECT!

Goal: You will select a comic strip and enlarge it to best fit an $8 \frac{1}{2}$ " x 11" sheet of paper. Include in your project:

1. The original comic strip (use my website for the URL)
2. The enlarged comic "cell" (colored to match original)
3. Measurements of the original comic cell
4. The scale selected to enlarge the comic cell

This means that for every 50 inches of actual length, you will draw 1 inch in your scale model. Since you are reducing from an actual size to a smaller scale model, you will have to divide the measurements by 50. This gives a length of 8 inches ($400 / 50$) and a width of 6 inches ($300 / 50$). So, your
