Generalization : Let  $F \times G$  be the cartesian product of two fractals sets  $F$  and  $G$ . Then  $\dim_{\text{H}}(F \times G) = \dim_{\text{H}}(F) + \dim_{\text{H}}(G)$   $\{\displaystyle \dim_{\text{H}}(F \times G) = \dim_{\text{H}}(F) + \dim_{\text{H}}(G)\}$  . [4]

The set's boundary also incorporates smaller versions of the main shape, so the fractal property of self-similarity applies to the entire set, and not just to its parts. The Mandelbrot set has become popular outside mathematics both for its aesthetic appeal and as an example of a complex structure arising from the application of simple rules.
