The black-knobbed map turtle (Graptemys nigrinoda), formerly known as the black-knobbed sawback, is a small to medium-sized aquatic turtle with light gray skin. Some of the most distinguishing characteristics of the black-knobbed map turtle, and the Graptemys genus, are the protruding "spikes" on the turtle's carapace.

**Black-knobbed map turtle - Wikipedia**

The Cagle's map turtle (G. caglei) is found in the Guadalupe, San Antonio and San Marcos rivers and associated flowing waterways in south-central Texas. Carapace and skin coloration is green with cream or yellow stripes. There is frequently a crescent-shaped stripe behind the eye, similar to G. p. kohnei.
